

Project Coordinator/Manager Services

At the heart of everything that Dextra does is our commitment to exceptional project management. Our approach is based on the premise that most environmental projects fall short of expectations, not because of the lack of technical know-how, but because of a lack of attention to detail on the critical aspects of project management. As an outsourced project coordinator/manager, Dextra fills a critical role in directing and coordinating the work of the various technical consultants and legal advisors involved in a complex remediation project.

In the role of project coordinator, Dextra provides a full suite of project management services including:

- Day-to-day administration
- Consultant management
- Regulatory agency negotiations
- Technical review
- Status tracking and reporting
- Budget and schedule management
- Risk evaluation
- Strategy development
- Cost Forecasting
- Facilitated problem solving

In a project coordinator role, Dextra functions as a seamless member of your project technical and legal team. As your project coordinator, Dextra will focus on:

- A strategic approach to managing the site liabilities
- Reducing budget overruns and cost surprises
- Promoting cost savings alternatives
- Achieving better performance from your technical consultants
- Showing measurable progress to both management and regulators
- Encouraging collaboration amongst the PRP Group towards the common goal of site closure
- Reducing rework and project inefficiencies

Dextra's project coordinator provides the skills to serve as the "hub" for your project team.
